

... for every elevator door
the appropriate mounting kit.

CEDES Mounting Kits

Description

A basic requirement for the faultless function of light curtains in elevators is professional mounting. However, because of the plethora of diverse elevator doors available this is not always easy. Space limitations and construction specifications complicate the mounting. That is why **CEDES** offers **mounting kits** for the **cegard/Max** and **MiniMax** light curtain systems which ensure that the light curtain system can be mounted quickly and precisely.

Alongside a **Universal Mounting Kit**, specially designed mounting kits for doors from reputed manufacturers such as Fermator, Meiller, Sematic and Wittur are available. For Fermator doors, there is the additional possibility to mount the emitter and receiver edges either dynamically or statically.

With the **CEDES** mounting kits it is also very easy to modernize older elevator equipment. Downtime of the elevator equipment and the risk of damaging the emitter or receiver edges through improper mounting are reduced to a minimum.

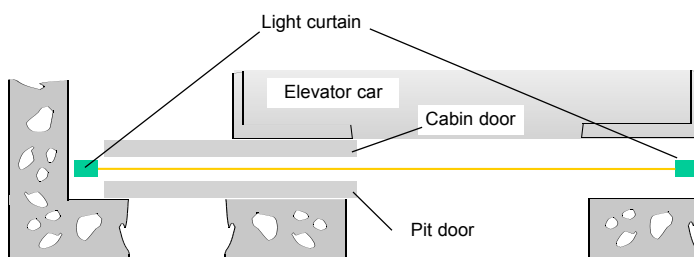

For applications where the emitter and receiver must be mounted inconspicuously, mounting kits with elegant vision shields are available. So that the function of the light curtain is not negatively influenced, the vision shield provides an aesthetically perfect finish and protects the optics from damage and vandalism.

Features

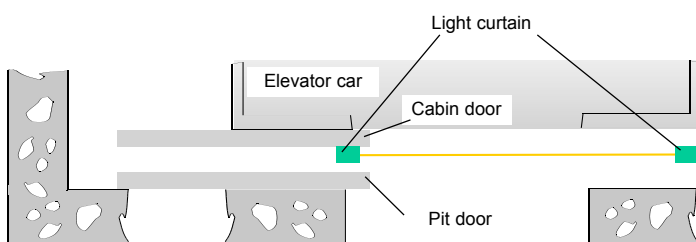

- For the quick and precise mounting of light curtains
- The appropriate mounting kit for every elevator door
- Proven thousands of times worldwide
- Vandalproof mounting possible with vision shield
- **cegard/Max** and **MiniMax** light curtains can be mounted with the same kit.
- All necessary accessories and mounting instructions provided

Mounting possibilities

Static mounting

Dynamic mounting
